PROFILE SUMMARY

Computer Applications graduate (Honors in Cloud Computing, CGPA 8.55) with hands-on experience building and deploying production-grade AI/ML systems, automating cloud and Linux infrastructure, and researching cloud security auditing frameworks. Proficient in Python, MySQL, Bash, and AWS, with a published, award-winning research paper on AI-driven security auditing. Seeking opportunities in AI/ML, Cloud Computing, or Cybersecurity where I can apply automation and applied ML skills to real infrastructure problems.

SKILLS

- Programming Languages:** Python, C/C++, Bash
- Web Development:** HTML, CSS, Django
- Databases:** MySQL
- Cloud & Systems:** Linux, AWS (EC2, IAM), Docker
- Tools:** Git/GitHub, VS Code, Jupyter Notebook
- Other:** Network Protocols, Debugging, Data Visualization, CLI Automation

EDUCATION

Jagran Lakecity University, Bhopal, MP

July 2023 - July 2026

Bachelor of Computer Applications (BCA), Honors in Cloud Computing — CGPA: 8.55

- Relevant Coursework: Operating Systems, Networking, Cloud Infrastructure, System Security, Linux Fundamentals, Data Structures

St. Mary's Convent School, Bhopal, MP

2011 - 2023

Senior Secondary (Class 12th): 66% | Secondary (Class 10th): 80%

WORK EXPERIENCE

AI/ML Intern — Infosys SpringBoard

Sept 2025 - Nov 2025

Key Project: AI-Powered Loan Eligibility System | Stack: Python, Streamlit, Flask, Google Gemini (LLM), Scikit-Learn, Firebase, Pandas

- Built and shipped an end-to-end AI application:** prototyped an interactive loan-prediction dashboard in Streamlit, then re-engineered it into a scalable Flask REST API with Firebase Authentication for secure, production-ready deployment.
- Architected a hybrid AI decision system:** combined a Decision Tree Classifier for quantitative risk scoring with Google Gemini (GenAI) to auto-generate Explainable AI (XAI) summaries, turning raw model output into user-facing, plain-language advice.
- Engineered the data pipeline:** built an automated preprocessing workflow in Pandas and NumPy to handle missing values and log-transform skewed features, keeping model performance consistent between prototype and production.

PROJECTS

- DockShield** | Bash, Docker, Linux — Built a single-script framework for hardening Linux servers (SSH, Fail2Ban, UFW) and automating Docker deployments, with intelligent project detection, dynamic conflict-free port allocation, and an interactive TUI dashboard.
- Cyber Threat Detection System** | Python, Random Forest, Streamlit, Plotly — Built a real-time intrusion detection pipeline trained on the CICIDS2017 dataset, with a Streamlit UI for batch analysis, on-demand model retraining, and interactive Plotly visualizations.
- Automated Synchronous Backup** | Bash, rsync, AWS EC2 — Built shell-based automation for local-to-cloud file sync using rsync and cron jobs with real-time logging; deployed and scheduled on an AWS EC2 instance.
- Infectious Disease Spread Prediction** | Python, ARIMA, LSTM — Built a time-series forecasting model to predict disease spread trends, combining statistical (ARIMA) and deep learning (LSTM) approaches with visualizations to support decision-making.

ACHIEVEMENTS & EXTRACURRICULARS

- Best Paper Award, ICEHAIDS-2024** — presented “Security Control Monitoring and Auditing in Cloud Computing,” integrating AI and blockchain into cloud audit processes.
- Research Presenter, ICIASET 2025** — presented “Adaptive Cyber Threat Detection in Cloud Environments Using Reinforcement Learning,” covering AI-driven detection frameworks and system integrity.
- Virtual Job Simulations (Forage):** Deloitte Australia — Cyber Job Simulation; Deloitte Australia — Data Analytics Job Simulation.
